Before the first scene

Agree a small objective and give each player one usable starting point.

Use this beside the Rules guide. Write your table's agreements and the changes that actually happen; these prompts add no new rules.

Gather the table

Choose a way to pause, check comfort and change direction. Nobody needs to explain a boundary.

Date, table and GM

Our setting, tone and things to leave out

Our pause signal, check-in and planned finish time

Choose the starting situation

Name a goal, a visible problem and another possible approach. An encounter's sample party budget is not a difficulty guarantee.

Scene or encounter / version

What are we trying to achieve? What can we perceive?

An approach besides a fight; what failure could change

Check each character

Use the GM's agreed starting budget. Neris is a level-8 demo; review a fork before using it. Read the actual limits of one useful capability.

Players / characters / agreed level or BU / separate Item BU

One usable capability, its supplies, and where to find current Vitality

- [ ] Sheets and dice or a dice roller are ready
- [ ] Everyone knows the objective and pause signal
- [ ] GM has read the encounter's pinned creatures and other approaches

Start with Your first game Inspect the selected public encounter

At the table, then after play

Follow one declared intent through its result. Reuse the record for a decision that taught you something.

Agree before resolving

Begin with intent. Ordinary actions may need no special purchase. For unusual behavior, inspect owned permissions; agree scope, resolution, stakes and any Cost before rolling.

Who acts, what do they want, and what access applies?

Agreed scope, timing, roll / threshold, success and failure

Agreed use Cost / supplies / duration and continuation point

Resolve and carry the change forward

Use the displayed total once. In combat, coordinate Council and Fast / Measured / Heavy. Movement shares the round's allowance; reactions need their own valid trigger and available slot.

Actual dice + displayed bonus = total; what happened?

Vitality before / after; supplies spent; ongoing effects and their endings

The new situation and the next decision

Keep the useful feedback

Record the rule / page or tool step, what you expected, what happened and any temporary ruling. Leave out other players' private information when sharing feedback.

One clear moment, one confusing step, and what we will try next

- [ ] Changed values and spent supplies recorded
- [ ] Ongoing effects have clear timing and ending terms
- [ ] Open questions saved with the version we used
